

IT PROJECT MANAGER

DUTIES

- The Project Manager is responsible for managing an IT project while ensuring an optimum outcome that satisfies the expectations of the business line in terms of quality, performance, cost and timeliness.
- He/she implements the various stages of the project: gathering and analysis of needs from the business line and, with support from applications developers, definition of the project completion schedule and an assessment of the human and technical resources needed.
- The Project Manager manages the project team and coordinates the various technical participants. He/she coordinates the communications and support actions on behalf of users. He/she ensures that the objectives are achieved within the allocated budget and on deadline.
